

Turnaround time in port

< 10%

A faster port turnaround time makes it possible to decrease the vessel speed at sea. This is mainly a benefit for ships with scheduled operations, such as ferries and container vessels. The turnaround time can be reduced for example by improving manoeuvring performance or enhancing cargo flows with innovative ship designs, ramp arrangements or lifting arrangements.

Impact of reducing port time for a typical ferry.

Port time		Energy
2 h	-->	100%
-10min	-->	97%
-20min	-->	93%
-30min	-->	90%
